

## GLOBAL SCRAP MARKET RECOVERY – AN ISRI TOWN HALL SERIES

Global scrap trade has been significantly impacted by COVID-19. From national lockdowns and variances in essential business designations for manufacturers and recyclers to the prioritization of critical health and welfare needs, trade in scrap commodities sharply declined but is on the rise. In a two-part series, ISRI is bringing together experts and partners to talk about current market conditions around the world that influence scrap trade. We welcome our members to join the discussion with speakers that will provide insights as to what is happening in their regions.
