

BACKUP CAMERAS PROVIDE GREATER VISIBILITY FOR MOBILE EQUIPMENT OPERATORS

Blind spots to the front or rear of heavy equipment pose big hazards. Accidents while maneuvering can represent big and unexpected costs to a business. A camera system can dramatically reduce such outlays. Consider installing backup cameras on material handlers, end loaders, forklifts, and trucks. Any piece of heavy equipment that has restricted vision while backing could benefit from the addition of a backup camera. The reduced risk of injuries and property damage while backing far outweighs the costs of these units.
