

### For Your Safety: **Loading ALERT!**

An ISRI member had a very close call during a scrap loading operation. Luckily, no one was hurt. The member sent along the following message and photos as a warning of what can happen and why you want to keep drivers out of the truck during loading and unloading.

“We had a near miss which I want to share with you in hopes that this is shared with others yards. The driver was supposed to be out of truck while it was being loaded by the crane. The crane was pushing material into bin when it went through bin and into truck. As you can see from pictures we were very lucky. A couple of feet the other way and we would have had a major injury.”
